November 2026

8 changes in this version

Designed and developed by **Tejas Munjal**

zoya-installer.onrender.com

New

- **Washing machine, dryer and AC** “washing machine kitna time baki hai” → time left and when it stops; “AC ka temperature kya hai” → on/off, mode, set and room temperature; “AC 24 pe kar do”, “AC band karo”. Zoya says when the wash starts (with the time left), 5 minutes before the end, and when it is done. Works with LG ThinQ and Samsung SmartThings (token in a secure box) and any brand through Home Assistant. Settings → Appliances, ⚙ → WASHER & AC, ✨ menu. The washer is read-only (no remote start).

- **Change the Gemini API key inside Zoya** ⚙ → 🔑 GEMINI API KEY, Settings → Gemini key, the ✨ menu, or say “API key change karo”. Paste, test, save; Zoya reconnects with the new key at once.

- Zoya's own arc icon in the taskbar (it showed the Python logo before).

Changed

- Every Gemini key format is accepted (newer keys no longer start with “AIza”).

- The Gemini key is required in the first-run welcome (no skip). The offline brain (Ollama) stays as the backup.

- **Full setup is much faster** the offline parts install at the same time as the packages, an Ollama and its models already on the PC are copied instead of downloaded, one backup model and one Whisper model instead of two, and quicker pip settings.

- **Zoya knows her creator** “tumhe kisne banaya?” / “Tejas Munjal kaun hai?” → Tejas Munjal (also in offline mode).

- Both setups open the Zoya thank-you page (zoya-feature.onrender.com) as soon as installing finishes.

At a glance

What Zoya 2.0 can do

Talk and think	
Live voice chat in English, Hindi and Hinglish	✓
Offline backup brain (Full setup)	✓
Knows her creator, Tejas Munjal New	✓
Recognises your voice: didi, bhaiya, aunty, uncle	×
