ZOYA

Zoya 4.0

Release notes

Zoya in 3D, with her own operating layer — she watches, builds, creates and updates herself, with your data kept.

Updates herself (new)	4
Watches, builds and creates (new)	6
Your Zoya account (new)	2
Messages, devices and your PC (new)	7
New look	4
Voice and accent	3
Zoya's operating layer (new)	15
Intelligence and memory	4
Autonomous tasks	1
PC superpowers	5
Proactive, but polite	1
Voice	6
Smart home	1

November 2026

59 changes in this version

Designed and developed by **Tejas Munjal**

zoya-installer.onrender.com

Updates herself (new)

- **Automatic updates** when a new version (5.0 and later) is published on the Zoya website, Zoya downloads it in the background and installs it by herself the next time nobody is talking to her — no question, no reinstall.
- **Your data never goes** keys, logins, settings, memory, face data, chats and files are never touched; only Zoya's own code is replaced, and every changed file is backed up first.
- **Safe by design** an update is installed only if it carries Tejas Munjal's digital signature and its checksum matches. The new version is test-started first; if anything fails, the old version is put back automatically.
- Zoya restarts by herself and tells you what's new. Turn it off any time in Command Center → Autonomy, or say "auto update band karo". "Pichla version wapas lao" goes back one version.

Watches, builds and creates (new)

- **Screen watch** every 20 seconds Zoya understands what's on the screen ("aage kya karu?") and speaks up only when something is wrong (error, failed install, stuck). Never private windows, never while you're away; no screenshots kept.
- **Build Studio** "Minecraft server tool bana" — Zoya builds the whole app in its own folder, tests it, fixes what fails and shows every step live; then open or run the finished app.
- **Tool Forge** when Zoya lacks an ability she writes a new tool for herself, checks it for anything dangerous, tests it in the sandbox, and installs it only after you say yes.
- **Animated video maker** explainers, intros, promos and wishes (5–120 s) recorded to MP4 in Videos\Zoya.
- **Voice recognition** never switches away from you on one unclear sentence, ignores her own voice and TV/music better, and "main hi hoon" corrects her on the spot and teaches her your voice.
- **Account icon (top right)** your Google email, Switch account and Sign out.

Your Zoya account (new)

- **Continue with Google** the first thing Zoya shows (once per PC). Google's own page signs you in; Zoya never sees the password.

- Zoya's user list (Firebase) keeps only email, name, Zoya version, Windows version, city/region/country and sign-in times — never chats, memory, files, screen, voice, face, passwords or keys. Only the developer's account can read it (admin page + Firebase console).

Messages, devices and your PC (new)

- Instagram DMs are read from Instagram's own inbox data every ~25 seconds, even when no Instagram window is open; log in once inside Zoya. Fixed: after the Instagram/Gmail window was closed, every later check failed silently.
- **Every app on the PC** Windows notifications (Instagram app, WhatsApp, Telegram, Outlook, Teams, web notifications) are told within about 3 seconds.
- Zoya learns your apps and contacts and asks about new people ("ye kaun hai? inke message turant bataun?"); "mere apps analyse karo" shows who messages most, where and when.
- **Devices & apps window** one card per TV, lights, phones, washer/AC, Instagram, WhatsApp, Gmail and PC apps with a clear Connected / Not connected state and plain buttons. Replaces the old Smart Home menu.
- **Zoya Black Box** a flight recorder for the PC — CPU/RAM every minute, spikes (which program), crashes and hangs, unexpected shutdowns, files added/changed/deleted, clean-ups and everything Zoya did. "Kal raat PC mein kya hua?" gives the exact timeline; Command Center → Black Box is an interactive time-travel graph with recovery buttons.
- **PC cleaner** temp files, crash dumps, old error reports and Zoya's caches are cleaned by herself once a day when the PC is free; the Recycle Bin and big old downloads only after you say yes.
- **Laptop troubleshooter** "Insta nahi khul raha", "block hai", "net nahi chal raha" — checks internet, DNS, hosts-file blocks, proxy, VPN, clock and what the site says, asks you what you see, then offers fixes.

New look

- **Zoya is now a real 3D character in the middle of the screen** she lip-syncs to her own voice, blinks, breathes, nods while talking and shows expressions (smile, focused, concerned, surprised) — in a neon room with a halo ring, a holographic globe, a status pill and a live voice waveform. Drag to turn her, double-click to reset. If the PC can't run 3D, a still render of the same Zoya is shown instead.

- **The whole window follows the approved design** profile + System Monitor with icons and live graphs, uptime, focus timer and AI CORE / SEC / MODEL badges on the left; Conversation on the right with Zoya's small picture beside her messages, a message box with mic, attach and send; Today card (greeting, live weather, PC status, reminder), colourful Quick Actions and a Command Input card with suggested commands under the stage; a footer with quick links.
- Every old button still works (Tools ▸ classic toolbar, Settings ▸ ⚙ and 🎛 drawers).
- **AI Command Center** Overview, Agents & Goals, Memories, Tasks, Automations, Timeline, Autonomy, Devices, Health, Brain and Voice.

Voice and accent

- A warmer default voice (Sulafat) and all 30 Gemini voices to choose from (Command Center → Voice).
- **Natural Indian accent** Hindi words pronounced the Hindi way, clear Indian English, smooth Hinglish switching; an accent setting (Indian English + Hindi, Hindi first, or automatic).
- Weather on the Today card and by voice now gives real numbers (Open-Meteo, no key) instead of opening a browser.

Zoya's operating layer (new)

- **Goal Graph** long-term goals with milestones, dependencies and progress; "agla kya karu?" picks the next step.
- **Outcome-based intelligence** say the result you want ("PC fast rahe exam se pehle"); Zoya turns it into checks and tracks it until it's achieved.
- **Persistent project agents** one helper per project with its own notes, files, goals, progress and work log.
- **Cross-session task continuity** multi-step tasks checkpoint after every step and resume after a restart.
- **Personal Knowledge Compiler** folders you allow + saved memories become a searchable, self-updating knowledge base with topics; answers name the files.
- **Cross-application reasoning** one question across Excel, CSV, PDF, Word, browser tabs and open apps.

- **AI Negotiation Engine and multi-agent collaboration** Planner, Engineer, Skeptic and Guardian agents propose and critique solutions; a judge picks the best-justified one and explains the trade-offs. Multi-agent verification checks results independently.
- **Zoya Sandbox and simulation** generated code runs first in an isolated sandbox (no network, no programs, no file changes outside a temp folder); automations and plans can be rehearsed without doing anything.
- **Workflow DNA and self-improving workflows** every automation has versions, diffs, rollback, run history, tests and reusable components; Zoya suggests fixes from the history and can apply the safe ones herself.
- **Failure Intelligence and self-healing integrations** errors are remembered with what fixed them; integrations try the recovery that worked before; adaptive strategies pick the way that works best on your PC.
- **Autonomy Governor and confidence-based autonomy** levels (cautious / balanced / trusted), hourly budgets, spend limit, "always ask" list; agents run low-risk work alone, medium risk only when confident, high risk always asks.
- **AI activity timeline** every action, decision, result and approval is recorded on this PC, searchable and exportable to CSV.
- **Zoya Dream Mode** at night she reviews goals, projects, unfinished tasks, recurring errors, workflows, outcomes and the knowledge base (memories only if you allow) and has suggestions ready in the morning.
- **Anticipatory computing** learns your routine from the timeline and offers what you usually need around now.
- All of it is in four new voice tools (goals, knowledge, sandbox_lab, zoya_os) — owner-only with the voice lock.

Intelligence and memory

- **Long-term memory** preferences, people, projects (with progress and due dates), apps and conversations; a knowledge graph that connects them; temporary notes that expire unless kept; view, search, edit and delete them.
- **Context recall** Zoya quietly remembers related things while you talk; app memory when you switch apps.
- **Brain selector** auto (Gemini online, offline Ollama when the internet is down), Gemini, Ollama or any OpenAI-compatible server for tasks, reports and research.

- Answers from the web say where they came from and how sure Zoya is.

Autonomous tasks

- “Downloads organise karo”, “kal ki presentation bana do”, “30k ke andar best camera phones dhundo”, “in PDFs se report banao”: Zoya plans the steps, runs them in the background, checks each result, retries a different way when something fails, makes Word reports and PowerPoint decks, and reports back. Sending, posting, deleting, paying and moving files wait for your OK. Every task is saved in the task history.

PC superpowers

- **Copy or move files between drives by voice** “ye file D drive se E drive me copy karo” — checks space, never overwrites, verifies the size, big copies run in the background, undo works.
- Find files by describing them (“wo PDF jisme electricity bill tha”, “pichle hafte ki photos”, “Arijit ke gaane”).
- Organise a folder by what the files are (bills, resumes, screenshots, photos, study notes...), with preview and undo.
- **PC Health Doctor** why the PC is slow, heaviest apps, startup programs, temp-file cleanup, disk space.
- Workspaces (“coding setup kholo”) and automations with time, app-open or startup triggers.

Proactive, but polite

- Morning briefing, alerts for unusual PC behaviour (CPU/RAM stuck high, disk almost full), deadline reminders and suggestions based on your habits — each one can be turned off, and quiet hours (default 23:00–07:00) keep Zoya silent.

Voice

- “Hey Zoya” wake word with her own name (offline, Full setup).
- **Song recognition is much faster** Zoya tries after 5 seconds and stops as soon as she knows the song.

- “Recognise my voice” now works without setup: Zoya learns the owner's voice from the first few sentences after a face login. Family members get their own voice profile and permissions (“ye Mummy hain, inki awaaz yaad rakho”).
- Personalities (friendly, professional, concise, humorous, warm) and modes (study, coding, gaming, work, relaxed).
- Greetings that fit the time of day and what you are working on.
- **Custom voice (beta)** your own voice for alerts, only with consent, encrypted, deletable.

Smart home

- Device discovery on your network (Google Cast, WiZ, UPnP TVs, Home Assistant) and scenes: movie, sleep, good morning, leaving home.

At a glance

What Zoya 4.0 can do

Talk and think	
Live voice chat in English, Hindi and Hinglish	✓
Offline backup brain (Full setup)	✓
Knows her creator, Tejas Munjal	✓
Recognises your voice: didi, bhaiya, aunty, uncle	✓
Song recognition and hum-to-play	✓
3D Zoya with lip-sync and expressions New	✓
Natural Indian accent, 30 voices New	✓
Long-term memory, knowledge graph, Memory Manager New	✓
“Hey Zoya”, personalities and modes New	✓
Song recognition in about 5 seconds New	✓

Zoya's operating layer	
Goal Graph, outcomes and project agents New	✓
Knowledge base from your files + cross-app answers New	✓
Agents debate, collaborate and verify New	✓
Sandbox, automation rehearsal and Workflow DNA New	✓
Failure intelligence and self-healing integrations New	✓
Autonomy Governor and activity timeline New	✓
Dream Mode and anticipatory suggestions New	✓
Tasks resume after a restart New	✓

PC and work	
Black Box: what happened on the PC, time travel New	✓
Cleans the PC and troubleshoots problems New	✓
Screen watch every 20 seconds New	✓
Builds whole apps and new tools for herself New	✓
Animated video maker New	✓
Screen agent: opens apps, fills forms, works in Excel	✓

Meeting notes, quiz and flashcards from PDFs	✓
File converter: PNG → JPG, MP4 → MKV, Word → PDF	✓
Autonomous tasks: research, reports, presentations New	✓
Copy or move files between drives by voice New	✓
Find files by description, PC Health Doctor New	✓
Workspaces and Automation Studio New	✓
Phone and home	
Instagram DMs and every PC app's messages in seconds New	✓
Phone control: OTP to PC, find my phone, notifications	✓
Gmail, Instagram, Facebook and WhatsApp	✓
Several phones at once, every message read out	✓
Smart lights, Android / Google TV and Samsung TV	✓
Washing machine, dryer and AC	✓
TV through Home Assistant, no pop-ups	✓
Device discovery and scenes New	✓
Setup and safety	
Updates herself automatically, your data kept New	✓
Sign in with Google, account icon, sign out New	✓
Voice lock, encrypted backup, secure password boxes	✓
Change the Gemini key inside Zoya, every key format	✓
New look and AI Command Center New	✓
Proactive alerts with quiet hours New	✓
Choose the brain: Gemini, Ollama or OpenAI-compatible New	✓

Downloads: Zoya-Setup-4.0.exe (standard) and Zoya-Setup-4.0-Full.exe (with the offline brain, offline speech, "Hey Zoya" and voice ID).

How to update: download the new setup from https://zoya-installer.onrender.com/ and run it. Your settings, logins and memory stay as they are.
