ZOYA

Zoya 1.1.0

Release notes

The big first release: phone, Gmail, meetings, smart home, screen agent, social helper and the installers.

New	25
Earlier in this release	2

November 2026

27 changes in this version

Designed and developed by **Tejas Munjal**

zoya-installer.onrender.com

New

- **Phone control** notifications, OTP copied to the PC (never read aloud), find my phone, open apps. Connect by scanning a QR code; works from anywhere (mobile data, any Wi-Fi) with Tailscale.
- **Gmail helper** important mails, read, reply drafts, send after an on-screen confirm (app password in a secure box).
- **Meeting mode** records the call, then summary, decisions, action items and transcript.
- **Smart lights and plugs** Philips WiZ found automatically; Tuya / Smart Life brands (Wipro, Syska, Havells) after a one-time import.
- **Evening day summary** screen time, spending, notes, meetings and what is coming up.
- **Alerts** news on any topic, live cricket (wickets and innings only), product price drops.
- **Clipboard history** last 50 copies, encrypted; passwords and codes are skipped.
- **Study tools** quiz on the HUD, flashcards and a revision plan from any PDF or notes.
- Read and explain documents in Hindi, Punjabi and other languages, including scanned pages.
- **Voice lock** anyone can chat, but personal actions work only for the owner's voice.
- Encrypted backup and restore, including logins, on a new PC.
- **Auto-update** Zoya checks the website, verifies the download and keeps a rollback copy.
- **Screen agent** Zoya uses the mouse and keyboard to finish tasks (open apps or games, fill or fix forms, work in Excel). Asks before submit/pay/send/delete, never types passwords, Esc stops it.
- **Many files at once** drop or pick up to 50 files; ask, summarise, compare, or pull data into one Excel sheet.
- Phone setup window with the steps, QR code and remote access (also in Settings → TV & Devices).
- **Focus guard and drift nudges** after 10+ minutes of work, opening Instagram, YouTube or a game gets one playful line (also during the focus timer). Setting: Screen → Nudge me when I drift off.
- **Social helper through the phone** follow requests, new posts from people you follow, likes, comments and messages from Instagram, Facebook, WhatsApp and more, announced live. Post helper: captions, hashtags, song ideas and bio lines from your photo; sends the photo to Instagram on the phone and types the caption.

- **Instagram and Facebook without the phone** log in inside Zoya's own browser window (Zoya never sees the password), read follow requests, new posts and notifications, post a photo with caption from the PC (you press Share), log out, and change the password through a secure box.
- **Messages by voice with no confirm click** "Riya ko Insta pe bol kal milte hain" goes after 5 seconds (say "ruko" or press Cancel to stop). WhatsApp from the phone's contacts, WhatsApp Web in Zoya or the WhatsApp app; Instagram from Zoya's login or the phone. Setting: Ask before sending messages.
- Social alerts every few minutes, including new messages with a short preview.
- **Gmail by normal sign-in** "Gmail connect karo" opens Google's login in Zoya's window. Zoya then says who sent each new mail and what it is about, reads mails and sends replies (app password still works too).
- Weekly backup reminder; shared encrypted secret store; ruff lint config.
- **New first-run welcome** Zoya greets you, asks your name, plays her 3 voices to choose from, takes the Gemini key (with a Test button), then face (Extra Mode) and password (Simple Mode). TEST WELCOME.cmd previews it.
- **Installers** Zoya-Setup.exe (Zoya + Python + packages) and Zoya-Setup-Full.exe, which also adds the offline brain (Ollama + model sized to RAM), offline speech (Whisper), voice ID and FFmpeg; anything already present is skipped. Built with BUILD INSTALLER.cmd / BUILD FULL INSTALLER.cmd.
- ✨ menu in the header for all of the above.

Earlier in this release

- Real TV apps on Android TV / Google TV over ADB, Samsung TV control, secure TV logins.
- Screen awareness and Fix-it, laptop settings by voice, notes, expenses, screen time, routines, focus timer, downloads organiser, themes, mini orb, chat history, Live model auto-fallback.
